PROFILE

Lead Software Developer at Tizeti Network Limited, a multi-country Wi-Fi internet provider serving 8,000+ customers, with 5+ years building and shipping production web systems across frontend, backend, cloud and AI-integrated products. Leads development of Tizeti OS, the in-house ERP that runs the company's operations across 18 departments, and owns full-stack delivery of the customer products connected to it: Free Fiber Africa, WiFiCall, Hotspot / Express Wi-Fi and Tizeti Cloud. Has led a team of 6 developers across 3 countries, runs code reviews and mentors junior and mid-level developers. Also integrates LLMs (Claude, Meta, Ollama, OpenAI) into real products, builds and ships own products such as FileFlowHQ and TourFinderApp. Strong UI/UX and visual design skills, including prototyping with Google Stitch and v0.

TECHNICAL SKILLS

- Frontend: React.js, Next.js, Vue.js, TypeScript, JavaScript, Tailwind CSS, Bootstrap, shadcn/ui, Material UI, Framer Motion, Rust / WebAssembly (WASM)
- Backend: Node.js, Express, Laravel (PHP), PHP, Python (FastAPI), REST APIs, GraphQL, MySQL, Firebase, Supabase
- AI / LLM Integration: Claude API (including tool use), Ollama (self-hosted, fine-tuned models), hybrid LLM routing, ChatGPT / OpenAI API for prompt design, Meta Model API (Muse Spark, Muse Spark Open, Muse Voice Transcribe, SAM 3.1, Muse Wonder, Muse Image), AI-assisted backend scaffolding and content workflows, Dialogflow; GitHub Copilot, v0 and Google Stitch for prototyping and UI / UX
- Full-Stack Architecture: end-to-end feature ownership (API design through UI, auth, payment integrations, role-based access)
- ERP & Business Systems: custom ERP development, procurement / requisition workflows, inventory and asset management, HR / leave systems, field-operations scheduling, multi-level approval chains, invoicing
- DevOps & Deployment: AWS (CodeCommit, S3), Vercel (incl. serverless functions), Render, DigitalOcean (App Platform, Spaces, Droplets), Nginx, SSL, Cloudflare, Bitbucket Pipelines, CI/CD, Git, GitHub, Docker, env / config management, performance and caching optimisation
- CMS & Content Workflows: content-driven site architecture, admin / content management panels, structured content modelling, CMS integration and customisation, WordPress (manage wifi.com.ng)
- State Management: React Query, Redux, Context API
- Mobile & Testing: Capacitor (iOS / Android), Flutter, Jest, Vitest, React Testing Library
- Integrations: Paystack, Flutterwave, Google Maps, MapLibre GL, Leaflet, OpenStreetMap, Cloudinary, Resend, Mailgun, Mailjet, WhatsApp Cloud API, Adobe PDF Services
- SEO: on-page SEO, Open Graph / Twitter cards, structured data (JSON-LD), prerendering SPA routes, Google Analytics
- Design: UI / UX design, visual and brand design, prototyping with Google Stitch and v0, Canva (see Design Portfolio)

PROFESSIONAL EXPERIENCE

Lead Software Developer — Tizeti Network Limited, Lagos | 02/2025 – Present

- Lead development of Tizeti OS, the in-house ERP spanning 18 departments (procurement, accounts, requisitions, inventory / assets, stores, HR / leave, field installations / scheduling, compliance / KYC, sales, network operations, Marketing OS and task management) across a multi-country operation; top

contributor to the platform.

- Digitised procurement, requisition, refund and leave approval workflows with multi-level approval chains up to executive level (CIO / COO).
- Built field-operations tooling: engineer scheduling, installation SLA / time tracking and automated PDF reports.
- Own full-stack delivery across Hotspot, WiFiCall and Free Fiber Africa (React / TypeScript / Vue front ends, Node.js / PHP back ends), including PHP development on Tizeti Hotspot (hotspot.tizeti.com) and the company careers portal (tizeti.com/careers).
- Design and deploy backend APIs and services alongside modular, reusable frontend components, keeping frontend and backend contracts consistent.
- Set and enforce UI / UX and system-design standards across products, including CMS-style admin and content-management interfaces.
- Built the Tizeti Cloud customer portal (tizeti.com/cloud): marketing site, plans, registration with live Paystack billing, and customer dashboard.
- Manage CI/CD on AWS, with AI-assisted workflows for config, debugging and release checks, and source control on AWS CodeCommit across Tizeti OS, Tizeti Cloud, Free Fiber Africa, Hotspot / Express Wi-Fi and wifi.com.ng.
- Mentor junior and mid-level developers; lead code reviews and architecture / ER-model discussions.
- Work with Node.js, GitHub and Docker on backend API work: integrate external APIs and support backend email / notification workflows.
- Run workflow and decision mapping with stakeholders up to executive level (CIO / COO), using flowcharts, process-flow design, system design diagrams and ER models to plan complex workflows and architecture before any code is written.
- Reduced load times by 30% through caching, reusable components and query optimisation.
- Built the fiber operations suite in Tizeti OS: fiber customer management, wireless-to-fiber migration flow, splitter assignment, network mapping and fiber support complaints.
- Built field-engineer workflows, a customer feedback / QA testing dashboard, a retention-agents module, mail-blast campaigns and a marketing data-analysis flow.
- Built the COO analytics dashboard in Tizeti OS, with charts tracking customer health across the business, including total expired and total churned customers.
- Worked on Hotspot / Express Wi-Fi (hotspot.tizeti.com, Vue.js / PHP): redesigned the retailer / RDE interface.
- Added speed-test and coverage-search features to Free Fiber Africa.

Lead Frontend Developer — Tizeti Network Limited, Lagos | 12/2023 – 02/2025

- Led the Front End team of 6 developers, overseeing frontend and backend operations, on Tizeti OS: a private project digitalising departmental workflows (bulk file upload, bulk data fetch) from customer registration through each department to customer portals across 3 countries.
- Designed secure authentication systems and an end-to-end secure payment gateway; built role-based access and KYC compliance workflows across departments.
- Ran code reviews and the team's Git workflow on AWS CodeCommit (feature branches, PR reviews, merges); reviews and debugging cut issue rates by 50%.
- Started the procurement module (bad-device reporting, payment-reference tracking). Built the leave-request flow with executive approvals, plus customer relocation, support-visit and installation-verification modules.
- Headed freefiber.africa: signup flow, country-specific KYC (e.g. Ghana ID types) and referral programme; the customer portal stays in sync with Tizeti OS across the customer flow, from signup to activation.
- Worked with designers and backend developers to keep UI/UX consistent across the ERP and customer dashboards; used flowcharts to plan complex frontend workflows.
- Led product demos and end-user documentation; contributed to design and architecture decisions.

Frontend Developer — Tizeti Network Limited | 03/2022 – 12/2023

- Designed and implemented end-to-end secure payment gateways and user-facing dashboards.
- Debugged and optimised applications, reducing issue rates by 30%.
- Maintained wifi.com.ng on WordPress and built its React signup and regional pricing flows, with state-by-state plans (Lagos, Abuja, Port Harcourt).
- Worked in an agile team with daily stand-ups, sprint planning and technical discussions.
- Automated the full customer and sales flow in Tizeti OS: from sales and customer signup through field service and installation to customer activation.
- Worked on the new-system rollout (routing, sidebars), map clustering and Google Translate support.

NYSC Frontend Developer — Tizeti Network Limited | 04/2021 – 03/2022

- Developed responsive applications using React.js, Redux, PHP and TypeScript.
- Implemented secure payment gateways and integrated REST APIs.
- Designed responsive email templates for bulk messaging and landing sites.

PROJECTS

- **Nudgy** (getnudged.chat): founder and sole engineer. Built from scratch in ten days as a selected participant in the Meta Global AI Developer Hackathon (Cerebral Valley, remote, Oct–Nov 2026): a reminder app that turns messy voice or text brain-dumps into reminders and nudges the user until each one is done. Multi-model system on Meta's models (Muse Spark, the open-weights Muse Spark Open on Baseten or Modal, Muse Voice Transcribe, SAM 3.1 for photo proof, and Muse Wonder and Muse Image for badge art), with a model switch and backup. A "Plan my day" agent works one tool per step; the server refuses past, sleep-hour and clashing times so the agent has to retry, and Undo reverses the run. Model output is never trusted blindly: confirmations are built from what was actually saved, so the app can't claim a reminder it didn't make. React 19, Express, Postgres, Render.
- **FileFlowHQ** (fileflowhq.com): founder and sole engineer. A privacy-first productivity suite where everything runs in the browser, so files never leave the user's device and server costs stay close to zero. The 17 file tools are free (image and HEIC conversion, compress-to-target-size, merge/split/compress PDF, PDF ↔ Word, PDF read-aloud, document and QR scanners, CSV/JSON), across a web app, PWA and a Chrome extension. Revenue comes from FileFlowHQ Studio (studio.fileflowhq.com), paid in-browser PDF, photo, video, document, slide and spreadsheet editors built on Rust/WebAssembly, with Paystack checkout for exports. The backend is a handful of Vercel serverless functions (Paystack, Resend email, Upstash Redis) plus cookie-free in-house analytics with an admin dashboard. Also built a WhatsApp bot on the Meta Cloud API, with signature-verified webhooks, that turns photos sent in chat into PDFs. Open-sourced the core tools as @fileflowhq/tools (MIT, on npm), with a CLI that copies ready-made React components into any project.
- **linqsafe** (linqsafe.com) — Link-in-bio platform with 8 templates, 5 themes, built-in analytics, pay-per-feature upgrades in naira via Paystack, an AI bio feature and a founder admin console with growth, revenue, traffic and fraud-and-risk analytics. React / Vite / Tailwind, Node / Express and MySQL, deployed via GitHub Actions.
- **TourFinderApp** (tourfinder.app) — Conversational AI travel guide (food, landmarks, transport, safety, places to stay). Hybrid LLM routing on a Python / FastAPI backend: a self-hosted fine-tuned Ollama model for simple questions, Claude for safety-critical, time-sensitive and place-lookup queries. Claude tool-use loop for place search (OpenStreetMap, optionally Google Places) with web-search fallback, IP-based location, persistent sessions and free-plan usage metering. A rebuild of "Mobot", my Bowen University final-year project.
- **MAD — Mindfully Articulated Design** (mad-peach.vercel.app) — Design-led website for MAD (Mindfully Articulated Design), a product, marketing and design firm offering product design and digital solutions, brand identity and branding systems, UI / UX design, web development and marketing. Node.js content platform / creative agency site with a custom admin panel, live-edit CMS panel, session authentication and image uploads to DigitalOcean Spaces; deploys via Bitbucket Pipelines to DigitalOcean App Platform.

- **Volasec** (volasec.com) — Conversion-focused multi-page website for a security and compliance consultancy (SOC 2, ISO 27001, cloud security architecture, risk assessments), with structured service messaging, responsive layout and SEO metadata.
- **Abánítúnráse** (abanitunrase.com) — E-commerce and booking platform for a styling house (bridal styling, occasion looks, Kájáyelo travel wardrobe curation): Paystack with server-side verification, Cloudinary signed uploads, Resend email, WhatsApp Cloud API notifications, custom admin dashboard.

EDUCATION

- B.Sc. Computer Science & Information Technology, Second Class Upper Honours — Bowen University, Iwo (2016 – 2020)
- Social Director, Computer Science Department (2019 – 2020)
- Final-year project: Tourist Guide Chatbot: A Case Study of Ibadan Metropolis (Mobot), built with Flutter and Dialogflow
- West African Senior School Certificate Examination (WASSCE) — Sunshine International High School, Ibadan, Oyo State (09/2010 – 07/2016)

CERTIFICATIONS

- Meta Full Stack Developer: Front-End & Back-End from Scratch Specialization — Meta | Coursera, 2026
- Introduction to Front-End Development — Meta | Coursera, 2026
- Google AI Professional Certificate (8 courses) — Google | Coursera, October 2026
- Cisco Certified Network Associate (Online Training Certificate of Completion) — August 2020
- National Youth Service Corps (NYSC) — service completed March 2022
- Institute of Personal Development and Customer Relationship Management (IPCDRM), Qatar — 2025
